## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims **1**, **22** and **26** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claims **1**, **22** and **26**, the dark current is always present in the sensor regardless the exposure time, therefore there will be signal detected due to dark current. As seen in the specification (Page 7, lines 18-23), a very short exposure is taken so that  $\tau$  is small so that the terms including  $n_{d1}$  and  $n_{p1}$  is negligible in equation 4 (Page 6, line 7),

$$S_1 = G_1(f_1(T, \tau) + k_1 I_1 R_1 Q E_1) + O_1, \quad (4)$$

That can be expressed as:

$$S_1 = G_1(n_{d1} + n_{p1}) + O_1,$$

and  $O_1 = S_1$

Art Unit: 2612

However, as explained above, since the dark current will be present regardless the exposure time, the dark current and projected light produced signals cannot be small compared to the offset signals in pixels of the first CMOS array.

Therefore, one of ordinary skill in the art would not be able to make a use of the claimed invention without undue experimentation. One would not be able to determine offset by reading out short exposure since the signal output would be  $(G_1 \times n_{d1}) + O_1$ , since  $n_{d1}$  exists regardless of how long or short the exposure is.

3. Claims **2-21**, **23-25** and **27-35** are rejected as been dependent upon rejected claims **1**, **22** and **26** under 35 U.S.C. 112.
